

ABSTRACT

Disclosed is a display device of the type having:

- a sheet made of light-diffusing material;
- lighting elements positioned on either side of the diffusing layer;
- a medium made of transparent material with the image to be displayed applied to it;

characterised in that the diffuser is constituted by a sheet of plastic with at least one surface which presents micro-grooves a few microns deep, so as to form a matt surface, and that the lighting elements are constituted by LEDs.
